SimpleRisk Release Notes

Version 20130929-001

This version provides fixes for several minor bugs in the prior releases, creates the base for including the Team Separation Extra, and added a new report showing the open risks assigned to the logged in user. If you are not already running SimpleRisk, then follow the standard installation instructions. If you are currently running the 20130916-001 release of SimpleRisk, then you will need to extract the new files over the old ones (back up your config.php first) and then run the /admin/upgrade.php script to upgrade your database.

The complete list of changes for this release is below:

- Bug Fixes
    - Fixed several "undefined index" errors in cases where arrays or strings were being returned uninitialized.
    - Fixed an issue listing users on the user_management.php page.
    - Added css/images to fix warning messages that were coming from jquery.
    - Removed an extra id parameter in one of the inputs on the prioritize_planning.php page.
    - Fixed an issue with project tabs on the prioritize_planning.php page.
    - Made the "name" field a primary field in the settings table to prevent duplicate entries.
- New Features
    - Added a new favorite icon.
    - Added a new function to check for the Team Separation Extra.
    - Added a new function to check for the Custom Authentication Extra.
    - Updated the recognition of installed extras to use the settings table in the database rather than the local file system.
- Reporting
    - Added a new report for open risks assigned to the user logged in.
